

Moodle Export Questions

Please follow the procedures below to export the questions in Question Bank :

The image shows two screenshots of a Moodle course page. The first screenshot shows the course overview for 'Nutrition (FDNT230, 2020 Spring)'. It includes a breadcrumb trail: Dashboard / Courses / Health / Nutrition (2020S). On the right, a settings menu is open, showing options like 'Edit settings', 'Turn editing on', 'Filters', 'Gradebook setup', 'Backup', 'Restore', 'Import', 'Share', 'Reset', and 'More...'. A red '1' is next to the gear icon. Below the course title, there are sections for 'Announcements', 'Attendance', and 'Course Outline'. A calendar view shows dates from 6 January to 26 January. The second screenshot shows the 'Course administration' page for the same course. It has a breadcrumb trail: Dashboard / Courses / Health / Nutrition (2020S) / Course administration. The 'Course administration' tab is selected, and a list of options is displayed: Edit settings, Turn editing on, Filters, Gradebook setup, Backup, Restore, Import, Share, and Reset. Below this, there are sections for 'Reports' (Competency breakdown, Logs, Live logs, Activity report, Course participation), 'Badges' (Manage badges, Add a new badge), and '3 Question bank' (Questions, Categories, Import, Export). A red '2' is next to the 'More...' option in the first screenshot, and a red '3' is next to the 'Question bank' section in the second screenshot.

Export category ?

Write category to file Write context to file

6

There are required fields in this form marked **!**.

Then a file will be downloaded. Below is an example of what the content is like :

```
// question: 0 name: Switch category to $course$/Default for Nutrition  
$CATEGORY: $course$/Default for Nutrition
```

```
// question: 21210 name: FDNT230.CH4-5.MT.001  
::FDNT230.CH4-5.MT.001::Matching 1{  
=Fructose -> Monosaccharides  
=Galactose -> Monosaccharides  
=Glucose -> Monosaccharides  
=Lactose -> Disaccharides  
=Maltose -> Disaccharides  
=Sucrose -> Disaccharides  
}
```

```
// question: 21213 name: FDNT230.CH4-5.MT.002  
::FDNT230.CH4-5.MT.002::Matching 2{  
=Amylopectin -> Starches  
=Amylose -> Starches  
=Cellulose -> Fibers  
=Digestible by human -> Starches  
=Indigestible by human -> Fibers  
=Pectin -> Fibers  
}
```

```
// question: 21216 name: FDNT230.CH4-5.MT.003  
::FDNT230.CH4-5.MT.003::Matching 3{  
=Alpha linolenic acid -> Omega-3 fatty acid  
=Arachidonic acid -> Omega-6 fatty acid  
=A Docosahexaenoic acid DHA -> Omega-3 fatty acid  
=B Linoleic acid -> Omega-3 fatty acid  
}
```
